

Prithvi C Balaji

Business Analyst — business analysis, business development, market research

Bengaluru, India · +91 86185 65590 · prithvi.aryan071@gmail.com · linkedin.com/in/prithvi-c-2ba646403 · prithviaryan071-rgb.github.io

Business analyst intern who has sold, researched and shipped. On Tricog Health's automation team I built two working products: an assistant that tells area sales managers how to close their monthly target gap, and a WhatsApp support assistant that handles first responses for a team taking around 7,000 tickets a month. Earlier, 33% campus sales growth at Red Bull and a cafe diagnostic the owner implemented for a reported 26% sales lift. Six languages.

Experience

Tricog Health — Bengaluru

2026 – Present

Business Analyst Intern, Automation & Business Intelligence

GIGA CHAT — WhatsApp customer support assistant (built, demonstrated to leadership, awaiting go-live) — try it: wa.me/917204386787

- Read a full year of support tickets — 85,308 of them — and showed 89% fell into only four kinds of problem, which is what made automating the first response worth doing.
- Turned five scattered internal documents into one knowledge base of 93 issues, each rewritten as steps a technician can follow on a phone and tagged fix-it-yourself, team-handled or straight to a person — the tag is what tells the assistant when to hand over.
- Designed the customer journey as four taps from "something is wrong" to a specific fix, and built the handover: if the fix does not work, a ticket is raised for the team automatically, already carrying the category, device, problem and priority.
- Compared six platforms before anything was built, presented the finished project and the decisions needed to launch it to company leadership, and contributed to the dashboards the team uses to track ticket volume and resolution.

Sales intelligence assistant for area sales managers

- Scoped the problem with the sales organisation: managers could see they were short of target, but had no quick way to know which dealers or which unworked leads would close the gap.
- Built a working assistant that reads the live sales tracker and answers, in plain language, how a manager stands against target, which dealers are best placed to help, and which leads are still open, dealer by dealer.
- Owned the question set, the data model and the output formats, and reconciled three trackers that recorded the same months and dealers differently, so every answer ties back to the sheet.

Red Bull — MSRIT campus

2024 – 2025

Student Marketeer

- Grew on-campus sales 33% by studying where students actually gather, pitching the college canteen on stocking the product and negotiating placement — owning the account from first approach to close.
- Ran campus activation events and recruited 16 participants for the Red Bull Wings for Life World Run, as the brand's day-to-day face to students, faculty and vendors.

Kapoor's Cafe — client project, business diagnostic and advisory

2025 – 2026

- Ran an on-site diagnostic of an independent cafe now at 25+ franchise outlets — a visit plus a structured interview with the founder — and mapped how the business actually makes money.
- Traced the main constraint to an unaddressed gap in marketing and pitched a focused social media plan. The founder adopted it and reported a 26% increase in sales.

Skills & interests

Business: requirements gathering, sales and pipeline analysis, market research, competitor analysis, root-cause analysis, stakeholder interviews, negotiation, presenting to senior audiences

Tools: SQL, Power BI, Excel (advanced), PowerPoint (advanced), Python, WATI (WhatsApp automation), Zoho Desk, chatbot design
